

AI Audit Report

Student Information

Field	Value
Student name	Nguyen Minh Khoi
Student ID	23127070
Class / Cohort	23KTPM1
Assignment ID	HW03 - GUI and Usability Testing on Event Management System
Assignment date	04/08/2026
AI tool used	OpenAI Codex
AI used	Yes

AI Use Declaration

I used OpenAI Codex to help prepare and maintain repository documentation, reusable Agent Skills, GUI checklist execution records, finding validation and reconciliation records, usability-testing artifacts, compatibility-testing artifacts, and Google Form submission tracking. AI-generated observations were not accepted as test facts without available evidence or explicit human review. Credentials and participant-sensitive data were excluded from the retained prompt record.

Prompt Used to Prepare the Log

tổng hợp các prompt trong đoạn chat vào prompt log
cập nhật vào AI audit

The complete chronological register is maintained in `prompt_log.md`. It contains 49 unique prompt IDs, `P-001` through `P-049`. The register uses faithful condensed wording because individual chat timestamps and a verbatim export were not available. No timestamp was invented.

Interaction Audit

Interaction	Prompt IDs	AI-assisted purpose	Output summary	Human review and control	Primary artifacts
1	P-001-P-003	Repository setup, reusable Agent Skills, checklist filename normalization, and SUT URL migration.	Skills and operational URL references were updated while historical URL facts were preserved.	File deletion and URL replacement were performed only after explicit direction; no Git commit was made.	<code>.github/skills / , gui_checklist.md , README.md , docs/main_report.md</code>
2	P-004-P-011	B1 GUI checklist execution, live verification, evidence handling, candidate validation, and reconciliation.	B1 execution records, evidence references, statistics, and approved findings were prepared and updated.	PASS/FAIL was not assumed; human rechecks and promotion decisions controlled final status.	<code>scenario_b/b1_home_events_listing/ , screenshots/ScreenB1/ , findings/</code>
3	P-012-P-017	B2 GUI checklist execution, evidence standardization, candidate review, and reconciliation.	B2 outputs were aligned with the B1 layout and canonical evidence paths.	The reviewer kept FC-004 and FC-005 separate, accepted available evidence, and explicitly approved FC-001-FC-007 for promotion.	<code>scenario_b/b2_event_detail/ , screenshots/ScreenB2/evidences/ , findings/</code>
4	P-018-P-023	B3 registration-form execution, checkpoint reconciliation, duplicate analysis, and finding promotion.	B3 results and eight approved findings were reconciled with B1/B2 conventions.	Specific checkpoint results, duplicate acceptance, promotion, classification consistency, and severity Low (1) were human decisions.	<code>scenario_b/b3_registration_form/ , screenshots/ScreenB3/evidences/ , findings/</code>
5	P-024-P-033	Usability-testing skills, Phase A artifacts, privacy/evidence review, participant reconciliation, and form submission.	Usability artifacts reflected two main participants, one pilot/helper, redacted images, no recording, and synchronized submissions.	Missing data was not recreated; the user confirmed participant counts, privacy status, evidence sufficiency, and account handling.	<code>.github/skills /participant-session-processor/ , .github/skills /usability-report-generator/ , usability_testing/ , screenshots/ , findings/</code>
6	P-034-P-036	Task 3 preparation and validation of the 15-row compatibility matrix.	Five planned environments were mapped consistently to B1, B2, and B3 with required OS/browser/device-class coverage.	Unknown execution metadata remained pending until real sessions; no environment availability or result was fabricated.	<code>compatibility_testing/compatibility_test_plan.md , compatibility_testing/compatibility_matrix.md , compatibility_testing/environment_log.md</code>

Interaction	Prompt IDs	AI-assisted purpose	Output summary	Human review and control	Primary artifacts
7	P-037-P-045	Manual compatibility execution across BrowserStack, LambdaTest, Browserling, Sauce Labs, and TestingBot.	Environment attempts, provider substitutions, blocks, completed checks, and evidence were reconciled across ENV-01-ENV-05.	Provider changes, account login, evidence exceptions, CP-B3-02 correction, ENV-03 white-screen result, and device choices were directed or confirmed by the user.	compatibility_testing/environment_log.md, compatibility_testing/compatibility_matrix.md, compatibility_testing/evidence/, compatibility_testing/compatibility_report.md
8	P-046-P-047	Compatibility finding review and Google Form submission.	CP-ENV03-FC-001 was documented, submitted, and included in synchronized totals.	The finding was submitted only after the user requested submission; the timestamp was recorded only after success.	findings/bug_and_usability_findings_log.md, findings/google_form_submission_log.md, compatibility_evidence
9	P-048-P-049	Prompt-log compilation and AI audit synchronization.	A 49-entry redacted prompt register and this audit report were prepared.	Individual timestamps remain unrecorded rather than invented; secrets remain redacted.	docs/prompt_log.md, docs/ai_audit_report.md

Human Oversight Record

- Human confirmation was required before applying draft GUI execution updates.
- A Valid Candidate did not automatically become a confirmed finding.
- Finding promotion, type decisions, and severity assignment remained under human control.
- Human review corrected unsupported AI conclusions, including CP-B3-02.
- Test results were based on live observations, supplied screenshots, tester notes, or explicit human review.
- Missing recordings, unavailable metadata, unsupported cloud environments, and blocked sessions were not fabricated.
- Google Form metadata was recorded only after actual submission.
- Authentication secrets were used only for the requested sessions and are not reproduced in the prompt log or this report.

Prompt Register Validation

Check	Result
Prompt ID range	P-001-P-049
Total prompt entries	49
Duplicate prompt IDs	None

Check	Result
Missing IDs in range	None
Credentials copied into audit	No
Individual timestamps fabricated	No
Ambient browser-state blocks logged as prompts	No

Limitations

- The retained conversation did not provide independently exportable per-message timestamps.
- The prompt register is condensed and is not represented as a verbatim platform export.
- Some actions depended on manual browser interaction, visual review, or user-confirmed results that Codex could not independently reproduce after the cloud session ended.
- Student name, class/cohort, assignment date, instructor, and signature details were not available and remain explicitly marked as not recorded.

Signature

Field	Value
Student name (printed)	Nguyen Minh Khoi
Student ID	23127070
Class / Cohort	23KTPM1
Course	CS423 / CSC15003 - Software Testing
Instructor	Mr. Lam Quang Vu
Date	04/08/2026
Signature	Khoi
